

**In the Claims**

1.       **(Original)** A method for defining a composite web page, comprising:  
identifying a web page;  
analyzing the web page to determine a list of the associated elements;  
presenting the list to a user;  
receiving a user selection of one or more associated elements from the list; and  
registering the user selection.
2.       **(Original)** The method of claim 1, wherein registering includes storing the user selection in a local registry.
3.       **(Original)** The method of claim 1, wherein registering includes transmitting the user selection to a remote server for storage.
4.       **(Original)** The method of claim 1, further comprising creating a specification, the specification including data defining how to fetch at least one web page associated with the selected elements and how to extract the selected elements.
5.       **(Original)** The method of claim 1, wherein identifying the web page includes identifying a plurality of web pages; and wherein the list includes elements associated with each of the plurality of web pages.
6.       **(Original)** The method of 5, further including defining segments of the list according to each of the plurality of web pages.
7.       **(Original)** The method of claim 6 where presenting includes presenting each of the segments of the list at separate times.
8.       **(Original)** The method of claim 1, further comprising determining an identifier associated with the user and wherein registering includes storing the identifier.

9. **(Previously Presented)** A method for presenting a composite web page, comprising:

receiving a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;

identifying at least one element of the composite web page;

retrieving the at least one element; and

rendering the at least one element to form the composite web page.

10. **(Original)** The method of claim 9, wherein identifying includes accessing a registry.

11. **(Original)** The method of claim 10, wherein identifying includes:  
determining an identifier associated with the user; and  
accessing the registry is based on the identifier.

12. **(Original)** The method of claim 9, wherein retrieving includes:  
retrieving a web page associated with an element; and  
extracting the element from the associated web page.

13. **(Original)** The method of claim 9, wherein identifying includes:  
accessing a registry, the registry including data defining the position of each element;  
and  
wherein rendering includes displaying each element according to the data.

14. **(Original)** A system for defining a composite web page, comprising:  
a processor;  
a memory coupled to the processor storing processor executable instructions to control the operation of the processor;  
the processor executable instructions including:  
instructions to identify a web page, the web page referencing at least one associated element;  
instructions to analyze the web page to determine a list of the associated elements;  
instructions to present the list to a user;  
instructions to receive a user selection of one or more associated elements from the list, the selected elements for display on a composite web page; and  
instructions to register the user selection.

15. **(Previously Presented)** A system for presenting a composite web page, comprising:  
a processor;  
a memory coupled to the processor storing processor executable instructions to control the operation of the processor;  
the processor executable instructions including:  
instructions to receive a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;  
instructions to identify at least one element of the composite web page;  
instructions to retrieve the at least one element; and  
instructions to render the at least one element to form the composite web page.

16. **(Original)** A computer-readable storage medium encoded with processing instructions for defining a composite web page, including:

- computer readable instructions for identifying a web page;
- computer readable instructions for analyzing the web page to determine a list of the associated elements;
- computer readable instructions for presenting the list to a user;
- computer readable instructions for receiving a user selection of one or more associated elements from the list; and
- computer readable instructions for registering the user selection.

17. **(Previously Presented)** A computer-readable storage medium encoded with processing instructions for presenting a composite web page, including:

- computer readable instructions for receiving a user request to present a composite web page, the composite web page defined by analyzing a web page to determine a list of the associated elements, presenting the list to a user, and receiving a user selection of one or more associated elements from the list;
- computer readable instructions for identifying at least one element of the composite web page;
- computer readable instructions for retrieving the at least one element; and
- computer readable instructions for rendering the at least one element to form the composite web page.

18. **(Previously Presented)** The method of claim 1, wherein analyzing the web page includes parsing HTML source code of the web page.

19. **(Previously Presented)** The method of claim 1, wherein presenting the list to the user includes providing a view of the relationships between the associated elements in the form of a tree structure.

20. **(Previously Presented)** The method of claim 9, wherein analyzing the web page includes parsing HTML source code of the web page.
